Artemis II

Occurred 7 months ago

The first crewed Artemis flight marks a key step toward long-term return to the Moon and future missions to Mars.

Mission Type

Crewed Lunar Flyby

MISSION DURATION

9 Days, 1 Hour, 32 Minutes

LaunchED

April 1, 2026

splashdown

April 10, 2026

> NASA’s SLS (Space Launch System) rocket launched the Orion spacecraft carrying NASA astronauts Reid Wiseman, Victor Glover, and Christina Koch, along with CSA (Canadian Space Agency) astronaut Jeremy Hansen, on the Artemis II mission on April 1, 2026, from Operations and Support Building II at Kennedy Space Center in Florida.

SLS (Space Launch System) Rocket

NASA's Artemis rocket is the SLS (Space Launch System), a super heavy-lift rocket that uses solid rocket boosters derived from the space shuttle and liquid-fueled engines attached to a new central core stage. SLS provides the power needed to lift the Orion spacecraft off Earth and send it into deep space.
