Saturn Moons

The Saturn system teems with natural satellites, from planet-sized Titan to small oddballs, shaped like potatoes or ravioli.

Saturn has 293 confirmed moons in its orbit as of August 2026, far more than any other planet in our solar system.

Saturn's moons range in size, from one that is larger than the planet Mercury — the giant moon Titan — to others as small as a sports arena. The small moon Enceladus has a global ocean under a thick, icy shell. Scientists have identified both moons as high-priority science destinations for future deep-space missions.
